

What is GATTEX?

GATTEX® (teduglutide) for subcutaneous injection is a prescription medicine used in adults and children 1 year of age and older with Short Bowel Syndrome (SBS) who need additional nutrition or fluids from intravenous (IV) feeding (parenteral support). It is not known if GATTEX is safe and effective in children under 1 year of age.

GATTEX® CONVERSATION GUIDE

What is the most important information I should know about GATTEX?

GATTEX may cause serious side effects including making abnormal cells grow faster, polyps in the colon (large intestine), blockage of the bowel (intestines), swelling (inflammation) or blockage of your gallbladder or pancreas, and fluid overload.

Please see Important Safety Information on pages 5 and 6, click for full [Prescribing Information](#) and [Medication Guide](#), and discuss any questions with your doctor.

If you're ready to know if GATTEX could be an option for you, the next step is to talk with your doctor. Here are some questions that can help guide your conversation. Take this list with you, add your own questions and ask your doctor to help you understand the potential benefits and risks of treating with GATTEX.

1. What volume of parenteral support (PS) do I currently require?

2. How often do I infuse nutrients or fluids? How long does it take?

3. How many years have I needed PS?

4. Have I experienced any complications from PS?

5. Do you think I'll be able to reduce my PS volume in the future?

6. Do you think I'll be able to reduce the number of day(s) per week I'm infusing PS?

7. Do you think GATTEX could help me?

8. What are the potential benefits of taking GATTEX?

9. What are the possible risks and side effects of GATTEX?

10. What types of tests and procedures will I need before starting GATTEX and while taking GATTEX?

11. Will GATTEX affect the medications I'm currently taking?

ADDITIONAL QUESTIONS FOR MY DOCTOR

Please see Important Safety Information on pages 5 and 6, click for full [Prescribing Information](#) and [Medication Guide](#), and discuss any questions with your doctor.

What would a day off PS mean to you?

GATTEX was studied in a 6-month clinical trial of 86 adult patients who needed to use PS at least 3 times a week for at least 1 year. GATTEX helped the majority of patients:

Reduce weekly PS volume

GATTEX 63% reduced PS by 20% or more

Placebo 30% reduced PS by 20% or more

Get more day(s) off weekly PS

GATTEX 54% achieved at least 1 day off PS

Placebo 23% achieved at least 1 day off PS

Please remember that no two SBS patients are alike, so individual results vary.

Important Safety Information

What is the most important information I should know about GATTEX?

GATTEX may cause serious side effects, including:

Making abnormal cells grow faster

GATTEX can make abnormal cells that are already in your body grow faster. There is an increased risk that abnormal cells could become cancer. If you get cancer of the bowel (intestines), liver, gallbladder or pancreas while using GATTEX, your healthcare provider should stop GATTEX. If you get other types of cancers, you and your healthcare provider should discuss the risks and benefits of using GATTEX.

Please see Important Safety Information on pages 5 and 6, click for full [Prescribing Information](#) and [Medication Guide](#), and discuss any questions with your doctor.

Important Safety Information

What is the most important information I should know about GATTEX?

GATTEX may cause serious side effects, including:

Making abnormal cells grow faster

GATTEX can make abnormal cells that are already in your body grow faster. There is an increased risk that abnormal cells could become cancer. If you get cancer of the bowel (intestines), liver, gallbladder or pancreas while using GATTEX, your healthcare provider should stop GATTEX. If you get other types of cancers, you and your healthcare provider should discuss the risks and benefits of using GATTEX.

Polyps in the colon (large intestine)

Polyps are growths on the inside of the colon. Your healthcare provider will have your colon checked for polyps within 6 months before starting GATTEX and have any polyps removed. Children and adolescents will be checked for blood in the stool before they start using GATTEX.

To keep using GATTEX, your healthcare provider should have your colon checked for new polyps at the end of 1 year of using GATTEX. If no polyp is found, your healthcare provider should check you for polyps as needed and at least every 5 years and have any new polyps removed. If cancer is found in a polyp, your healthcare provider should stop GATTEX.

Blockage of the bowel (intestines)

A bowel blockage keeps food, fluids, and gas from moving through the bowels in the normal way. Tell your healthcare provider right away if you have any of these symptoms of a bowel or stomal blockage:

- trouble having a bowel movement or passing gas
- vomiting
- stomach area (abdomen) pain or swelling
- swelling and blockage of your stoma opening, if you have a stoma
- nausea

If a blockage is found, your healthcare provider may temporarily stop GATTEX.

Swelling (inflammation) or blockage of your gallbladder or pancreas

Your healthcare provider will do tests to check your gallbladder and pancreas within 6 months before starting GATTEX and at least every 6 months while you are using GATTEX. Tell your healthcare provider right away if you get:

- stomach area (abdomen) pain and tenderness
- nausea
- chills
- vomiting
- fever
- dark urine
- a change in your stools
- yellowing of your skin or the whites of your eyes

Fluid overload

Your healthcare provider will check you for too much fluid in your body. Too much fluid in your body may lead to heart failure, especially if you have heart problems. Tell your healthcare provider if you get swelling in your feet and ankles, you gain weight very quickly (water weight), or you have trouble breathing.

Important Safety Information continues on the next page. Click for full [Prescribing Information](#) and [Medication Guide](#), and discuss any questions with your doctor.

Important Safety Information (continued)

The most common side effects of GATTEX in adults include:

- stomach area (abdomen) pain or swelling
- nausea
- cold or flu symptoms
- skin reaction where the injection was given
- vomiting
- swelling of the hands or feet
- allergic reactions

The side effects of GATTEX in children and adolescents are similar to those seen in adults.

Tell your healthcare provider if you have any side effect that bothers you or that does not go away.

What should I tell my healthcare provider before using GATTEX?

Tell your healthcare provider about all your medical conditions, including if you or your child:

- have cancer or a history of cancer
- have or had polyps anywhere in your bowel (intestines) or rectum
- have heart problems
- have high blood pressure
- have problems with your gallbladder, pancreas, kidneys
- are pregnant or planning to become pregnant. It is not known if GATTEX will harm your unborn baby. Tell your healthcare provider right away if you become pregnant while using GATTEX.
- are breastfeeding or plan to breastfeed. It is not known if GATTEX passes into your breast milk. You should not breastfeed during treatment with GATTEX. Talk to your healthcare provider about the best way to feed your baby while using GATTEX.

Tell your healthcare providers about all the medicines you take, including prescription or over-the-counter medicines, vitamins, and herbal supplements. Using GATTEX with certain other medicines may affect each other causing side effects. Your other healthcare providers may need to change the dose of any oral medicines (medicines taken by mouth) you take while using GATTEX. Tell the healthcare provider who gives you GATTEX if you will be taking a new oral medicine.

Call your doctor for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.
